EXPERIENCE

- (2018-Current) **Research Scientist. Biostatistics, Corteva Agrisciences:** Provide technical assistance to soybean and cotton breeding. Assist with the development of the genomic assisted breeding pipeline in soybeans and cotton. Provide technical support to trait introgression in soybeans. Curate and develop the standard analytical pipelines utilized for research and production. Implement machine learning approaches to automate SNP autoscoring. Develop and implement multi-trait methods and single-step analysis in the breeding pipeline. Build framework to utilizing environmental information for product placement and disease prediction for breeding and predictive agriculture. Incorporate elements of machine learning into breeding pipelines. Research statistical and computational methods for data analysis. Supervise interns. Lead research projects and initiatives targeting changes in breeding pipeline. Ensure academic excellence and scientific rigor in all internal deliverables and external publications.
- (2017-Current) **Adjunct Faculty. Department of Agronomy, Purdue University:** Collaboration with professors towards the training of plant breeding students. Give lectures pertinent to quantitative genetics, breeding analytics, and industry perspective on plant breeding. Contribute to writing grants under specific expertise. Be member of graduate students committee. Answer general student questions about breeding.
- (2016-2018) **Research Scientist. Quantitative Genetics group, Dow AgroSciences:** Worked on the implementation on the genomic prediction and selection pipeline in soybeans. Assisting and educate breeder on best practices for the deploying of genomic information for selection. Developed computational tools with high-performance computing for gene mapping, genomic prediction and selection. Develop customized apps for breeders and discovery breeders to perform genomic analysis. Germplasm analysis. Ensured transition of breeding operations from Dow to Corteva.
- (2013-2015) **Research Associate. Soybean Breeding, Purdue University:** Worked on field breeding and the analysis of yield and yield components in the SoyNAM population. Pioneered the genetic evaluation of drone-derived canopy traits in soybean. Developed the analytical toolset utilized to perform mapping of QTLs in next-generation populations. Worked on incorporating multiple applications of machine learning into plant breeding. Implemented analytical pipelines including genomics and spatial adjustment under multi-trait settings.

EDUCATION

- B.Sc. Agronomic Engineering (2007-2011). Federal University of Santa Maria, RS, Brazil.
- Ph.D. Soybean Breeding and Statistical Genetics (2013-2016). Purdue University, IN, USA. GPA 4.

KEY EXPERTISES

- Soybean genetics and breeding, field breeding techniques, marked assisted breeding, and breeding pipeline workflow.
- Breeding designs: experimental designs, spatial statistics, adjustment of field variation and imputation methods.
- Predictive breeding analytics: Mixed models, multivariate models, machine learning and Bayesian methods.
- Routine breeding analysis: QTL mapping, genome-wide association mapping, genome-wide prediction methods.
- Computational breeding: algorithm development and high-performance computing, and user-friendly apps.
- Data collection: Phenomics and high-throughput phenotyping technologies in plant breeding.

SOFTWARE DEVELOPED

- Crux: A supervised machine learning approach for autoscoring and quality classification. Corteva 2021.
- GS: Fast and efficient implementation of multivariate models based on Tilde-Hat & Gauss-Seidel. In: BT-SAT 2020.
- EigenDNN: In-house implementation of deep neural networks for genomic prediction. Corteva Agrisciences 2020.
- eMM3: Efficient Mixed Models Solver for large datasets and multiple sources of data. Corteva Agrisciences 2016-2020.
- MDH2: Marker Data Hub R package to access Dow Agrosciences molecular data. Corteva Agrisciences 2018.
- HP: Hybrid prediction tool from Dow Agrosciences production pipeline. Corteva Agrisciences 2018.
- QG2: Quantitative Genetic Analytical Tools for Modeling, Mapping, Prediction. Dow Agrosciences. 2016.
- Xavier et al. (2015). NAM: Association analysis and breeding tools (CRAN.R-project.org/package=NAM)
- Xavier et al. (2015). bWGR: Bayesian Whole Genome Regression (CRAN.R-project.org/package=bWGR)
- Xavier et al. (2015). SoyNAM package: Data & Summary (CRAN.R-project.org/package=SoyNAM)

AWARDS AND RECOGNITIONS

- Best Early-Mid Career Researcher Poster Slide, Intern. Conference of Quantitative Genetics 6. 2020.
- John Axtell Graduate Student Award in Plant Breeding and Genetics, Purdue University. 2016.
- ICQG5 Fellowship. Support for graduate students in plant breeding. Sponsored by USDA. 2016.
- Dow AgroSciences Graduate Scholarship. Integrity, academic excellence, initiative and leadership, 2016.
- Outstanding Graduate Research Award (PhD). Purdue 2015 Graduate Student Award.
- AG Spotlight - Graduate AG Research Spotlight. College of Agriculture, Purdue University. Feb 2015.
- Bauman-Doolittle Endowment - Support for graduate students in breeding and genetics. 2015.
- Loyal F. Pete Bauman Memorial Fund - Support for graduate students in breeding and genetics. 2014.
- Wyman E. Nyquist Scholarship - Quantitative Genetics. Purdue 2014 Graduate Student Award.
- Soy2014 Student Award - MCBS: 15th Biennial Conference. University of Minnesota, 2014.
